Rohit Saini

Python Developer | AI/ML Student | Backend & Automation
Jaipur, Rajasthan, India

Summary

BTech Computer Science (AI/ML) student passionate about building real-world backend systems. I work with Python, FastAPI, and Jinja2 — currently building full-stack web apps with templating, routing, and form handling from scratch. My projects are on GitHub and reflect a deep focus on understanding how things work under the hood, from HTTP fundamentals to template inheritance. Actively seeking Python/backend internships where I can contribute and keep growing. Currently working toward startup-ready solutions.

Education

JECRC University

Bachelor of Technology - BTech, Computer Science (AI/ML) · (August 2025 - June 2029)
